Objectives:

1. To study the prevalence of thyroid disorders (goiter, hypo- and hyper thyroidism, autoimmune thyroid disorders, thyroiditis) in certain communities who traditionally consume bamboo-shoots based on epidemiological studies in the post salt iodization period.
2. To evaluate the qualities, quantities and the type of bamboo-shoots (raw, dry, canned, boiled, fermented or medicinal forms), the people consume who are affected by thyroid disorders.
3. To determine the classes of cyanogenic glycosides/ thioglycosides present in the different varieties of bamboo-shoots of those north-eastern states by chemical analysis.
4. To study the molecular mechanisms by which these cyanogenic constituents present in bamboo-shoots cause alteration of thyroid function acting at the cellular/ genetic level for causing thyroid gland dysfunctions in human thyroid cell lines.
5. Whether the interfering action of these cyanogenic constituents originated from bamboo-shoot could be prevented by supplementing additional iodine/ by other means.
